Kyle Wong

Los Angeles, CA | kylewxng06@gmail.com | linkedin.com/in/kylewxng | github.com/kylewxng

Education

University of California, Los Angeles Sep 2025 – Present
B.S. Statistics and Data Science, Minor in Data Science Engineering GPA: 3.75 *Los Angeles, CA*

Relevant Coursework: Machine Learning Foundations (Cornell Tech), Mathematical Statistics, Probability Theory, Regression Analysis, Design of Experiments, Data Structures & Algorithms, Data-Driven Mathematical Modeling

Technical Skills

Languages: Python, SQL (Postgres, Snowflake), R, JavaScript/TypeScript
LLM & ML: LangGraph, RAG, sentence-transformers, pgvector, prompt engineering, PyTorch, scikit-learn, NLP
Data & Infra: dbt, Snowflake, Docker, AWS (Lambda, ECR), FastAPI, Supabase, Next.js, Tableau, Power BI

Experience

Pacific Life - Data Science Intern June 2026 – Present
AI-powered call transcripts and multi-agent fraud analytics *Newport Beach, CA*

- Engineered a **Snowflake Cortex** text-to-SQL agent over annuity and life policy data for the fraud analytics team
- Built **5+** derived columns and modified production **dbt Cloud** models to widen the agent's analytical coverage
- Benchmarked **4** fraud detection approaches, creating a rule-based and Isolation Forest ensemble POC that surfaced the **top 1%** synthetic accounts for manual review
- Deployed a **multi-agent** orchestration in Snowflake CoWork, routing a central agent to web-activity and call-transcript subagents, cutting manual case review time by ∼**80%** for fraud investigators

Trustworthy AI Lab - Undergraduate Researcher Feb 2026 – July 2026
Retrieval and query-generation agent across linked relational tables *Los Angeles, CA*

- Partnered with **PhD** researchers on prompt and retrieval design, surfacing edge cases that broke multi-table joins
- Evaluated retrieval quality across linked-table schemas, diagnosing failure modes in generated SQL
- Built the Next.js client for a **LangGraph RAG** pipeline on Supabase, handling streaming and multi-step agent state
- Shipped a cost-tracking dashboard and schema visualizer for per-query visibility into retrieval and token spend

Creative Labs - Software Developer Mar 2026 – July 2026
Agentic recommendation platform for LA event discovery *Los Angeles, CA*

- Shipped **TappedIn**, ranking LA pop-up events against user interest, budget, timing, and mood signals
- Fed an LLM **recommendation agent** from a web-scraped listings pipeline, tuning ranking against user feedback

Skinterest Tech - Machine Learning Engineer Intern Apr 2025 – Dec 2025
4 month-long client project with a NYC dermatology startup through Break Through Tech AI *Remote*

- Segmented **1,000+** Sephora reviews across **300+** products with an NLP pipeline using **TF-IDF** and **K-means**
- Mapped clusters to top and bottom-rated products in **Tableau** dashboards founders used to prioritize coverage
- Shipped customer persona models into the startup's product roadmap alongside a **4-person** fellowship team

Projects

Courtex - NBA Search Engine Tool | *Python, FastAPI, AWS Lambda, pgvector, Docker, React* courtex.vercel.app

- Indexed **35,499** NBA plays as 384-dimension sentence-transformer embeddings in **pgvector** for similarity search
- Built a **FastAPI** and Llama-3.3-70B RAG pipeline returning structured play analysis at ∼**5** second latency
- Served ranked results through a React query interface, containerized with Docker on AWS Lambda and ECR

Scenetic - CitrusHack 2025 1st Place Winner | *PyTorch, YOLOv8, React Native* github.com/kylewxng/scenetic

- Hit ∼**85%** accuracy matching user-described scenes to **YOLOv8** detections tagged through the Gemini API
- Delivered predictions through a **React Native** app streaming live drone footage from a Raspberry Pi
